GSM gateway

– Access to doors or entrances with
   a simple phone call or text message

prima

Give access to specific people within a limited timeframe

Prima's GSM gateway is the ideal solution, if you have several visitors, who only need access to a particular location within a specific timeframe. This could be truck drivers who need to deliver or collect packages within a certain timeframe.
The user gets access by calling or sending a text message to the number stored in the GSM gateway.

Advantages of the GSM gateway

- Functions as an online reader
- Access is granted via phone calls or text messages, so no need for access tags or cards
- Simple software administration - add users' telephone number, country code and selected timeframes to provide access
- Possibility for extended functions using individual scripts
- Economical solution as the GSM communication costs are the same as the standard call rate
- Possible to connect GSM gateway to Prima's FlexAir® access control system and send warning messages to relevant keypersons, when predefined events occur
